Building a vertical garden is similar to building a tall structure. A sturdy frame and the right materials are essential for a successful vertical garden, just as a strong foundation is necessary for a high-rise. Gardeners must also think about the weight and placement of plants, the amount of sunlight and water they will receive, and the overall design of their vertical garden, just as architects carefully select the right materials and meticulously plan each level of a building. Building a vertical garden can be similar to creating a towering work of art, with layers of lush foliage and bright blooms reaching towards the sky, with the right tools and attention to detail.
